

Modulbezeichnung	Solar energy
Semester	4
ECTS-Punkte (Dauer)	5 (1 Semester)
Art	Pflichtfach
Studentische Arbeitsbelastung	60 h Kontaktzeit + 90 h Selbststudium
Voraussetzungen (laut BPO)	
Empf. Voraussetzungen	Thermo- und Fluidodynamik, Elektrotechnik
Verwendbarkeit	BSES
Prüfungsform und -dauer	Klausur 1,5h oder mündliche Prüfung oder Mündliche Präsentation und schriftliche Dokumentation
Lehr- und Lernmethoden	Vorlesung, Studentische Arbeit
Modulverantwortlicher	I. Herraez

Qualifikationsziele

The students understand the physical and working principles of solar thermal as well as photovoltaic energy systems. They are capable to select and size the components required for the mentioned types of technologies. They are in a position to assess the performance and potential of those renewable energy systems. They are also able to design efficient hybrid energy systems combining different technologies and energy sources.

Lehrinhalte

Solar resource, thermal and electrical energy demand, components of solar thermal and photovoltaics systems, physics of solar energy utilization, performance analysis, efficiency of solar collectors and photovoltaic cells, design and sizing of solar thermal and photovoltaic systems, combination of solar energy systems with heat pumps.
