

Modulbezeichnung	Solar energy and biomass	
Semester	4	
Dauer	1 Semester	
Art	Pflichtfach	
ECTS-Punkte	5	
Studentische Arbeitsbelastung	60 h Kontaktzeit + 90 h Selbststudium	
Voraussetzungen (laut BPO)		
Empf. Voraussetzungen	Thermo- und Fluideodynamik, allgemeine Chemie	
Verwendbarkeit	BaSES	
Prüfungsform und -dauer	Klausur 1,5h oder mündliche Prüfung oder Mündliche Präsentation und schriftliche Dokumentation	
Lehr- und Lernmethoden	Vorlesung, Studentische Arbeit	
Modulverantwortlicher	I. Herraez	
Qualifikationsziele	The students understand the working principles of solar and biomass energy systems. They are capable to select and size the components required for the mentioned types of technologies. They are in a position to assess the performance and potential of those renewable energy systems. They are also able to design efficient hybrid energy systems combining different technologies and energy sources.	
Lehrinhalte	Thermal energy demand, solar resource, components of solar thermal systems, physics of solar thermal energy, performance analysis, efficiency of solar collectors, design of solar thermal systems, solar thermal power plants. Greenhouse effect, carbon dioxide emission; amount of biomass, biomass generation and drivers; utilization and potentials of biomass; energy plants and harvesting; availability and allocation, storage and ensilage; frame conditions and requirements on biomass; further aspects of power generation from biomass; combustion of biomass.
